Art Unit: 1631

The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1631.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 13-21, drawn to polynucleotides, vectors, host cells, methods of introducing vectors into cells, methods of modulating transcription, nucleic acid molecular hybridization assays, plant host cells, and plants classified in class 536, subclass 23.6, class 435, subclasses 468, 410, 6, and 410, and class 800, subclass 295.
- II. Claim 11, drawn to polypeptides, classified in class 530, subclass 350.
- III. Claim 12, drawn to antibodies, classified in class 530, subclass 387.1.

The inventions are distinct, each from the other for the following reasons. The polynucleotides, vectors, host cells, and plants of Group I are materially different from and are therefore independent and distinct from the polypeptides of Group II and the antibodies of Group III. The methods of Group I are not needed to produce the polypeptides of Group II or the antibodies of Group III. The polypeptides of Group II are materially different from and are therefore independent and distinct from the antibodies of Group III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1631

Claims 1-10 and 13-20 are drawn to nucleotides, nucleotide constructs, and/or methods requiring the use of nucleotides or nucleotide constructs that contain more than ten individual, independent, and distinct nucleotide sequences in alternative form. Accordingly, these claims are subject to restriction under 35 U.S.C. § 121 as outlined in 1192 O.G. 68 (November 19, 1996). This notice permits the examination of from one to ten independent and distinct nucleotide sequences in a single application based upon USPTO resources.

Applicant is required to select no more than ONE of the individual sequences for examination. The search of the no more than ONE selected sequences may include the complements of the selected sequences and, where appropriate, may include subsequences within the selected sequences (*e.g.*, oligomeric probes and/or primers).

Claims 11 and 12 mention a large number of unrelated polypeptides or unrelated antibodies. Should applicant elect either Group II or Group III, applicant is further required to select one polypeptide or one antibody for examination on the merits.

To search any two groups as outlined above would create an undue burden for the U.S. PTO because the searches of the non-patent literature are not only non-overlapping to any appreciable extent, but are also divergent in nature.

The instant application does not comply with the Sequence Rules (*i.e.* 37 CFR §§ 1.821-1.825) for the following reasons:

- (a) the "reverse sequences" (see claim 1 part b))) have not been submitted in computer readable form and are not included in the sequence listing (see also MPEP 2420-2435).

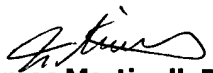

Appropriate correction is required. For any response to this Office action to be considered a complete response, applicants must submit a response that brings the application into compliance with the Sequence Rules as discussed herein.
